Journaling Notes:

Date: April 17th, 2024
Project: Unit 1 - Block 9
Takeaways:

This project was a learning experience. It took me closer to 5 hours to complete due to the amount of research I invested time into. If I had to do it again, I could probably get it done within an hour now!

It is better to add the background to the body in CSS, and not adding it under * { }. I also learned that you can use the float CSS styling to float an image within text. It is critical to note that the position of the image within the p tags will drastically change the output in Go Live.

Lastly, I was able to find a myriad of websites that have color palettes and corresponding CSS color #'s tat can be used to style the page and make it more visually appealing.
